1. Task description

For the technical task, please create a web-based application that loads and shows a list of FIS sanctioned athletes and details about their sanctions.

Description
1. Load sanctions using the public API endpoint and show latest 20 records sorted by competition date, showing: • Information about the offending athlete (name, year, nation, gender, FIS code) • Information about the competition (date, location, place, nation, category) • Information about the violations (name) • Information about the sanction (title) API documentation is available at https://api.fis-ski.com/documentation/public
2. Add filter for the sanction list that allows selecting rows by season, discipline, athlete name. Filtering should be dynamic using asynchronous JavaScript request.

Apply the best practices of software development when completing the task. There are no restrictions on JavaScript or backend frameworks/packages, choose whatever you think fits best for the task.

Please send the code, and instructions how to set the project up, in a format of your choice to it@fis-ski.com.
